

AI Engineer

Step 7: Apply for AI Engineer Roles

CareerCompass — Detailed Learning Notes

What this step is about

Present AI skills as engineering evidence rather than only course completion.

Core Concepts

- A strong AI portfolio combines Python/software engineering with data, ML, APIs, testing and deployment.
- Show problem, dataset, baseline, model choice, evaluation, deployment and limitations.
- Prepare for Python, data structures, probability/statistics, ML, deep learning, APIs and deployment questions.
- Be ready to explain why a model failed and what you would change with more data, time or compute.

Skills You Should Be Able To Demonstrate

- Complete two strong AI projects.
- Write technical case studies.
- Practice ML interview questions.
- Prepare a one-page resume.
- Explain one project architecture in 60 seconds.

Hands-on Project / Practice

- Build a portfolio with one classical ML project and one deep-learning/NLP/vision project.
- Deploy at least one model and include an architecture diagram.
