

DevOps Engineer

Step 7: Deploy Production Projects

CareerCompass — Detailed Learning Notes

What this step is about

Combine DevOps skills into a reliable production deployment.

Core Concepts

- Production systems need configuration management, secrets, logs, monitoring, health checks, backups and rollback plans.
- Use separate development/staging/production configuration.
- Infrastructure as Code makes environments repeatable and reviewable.
- Observability combines metrics, logs and traces; alert only on actionable conditions.

Skills You Should Be Able To Demonstrate

- Create a health endpoint.
- Centralize logs.
- Add basic metrics.
- Document rollback.
- Test a failed deployment.

Hands-on Project / Practice

- Deploy a containerized application with CI/CD, HTTPS, health checks and basic monitoring.
- Write a short incident runbook for common failures.
