

# Mobile App Developer

## Step 6: Publish Mobile Applications

CareerCompass — Detailed Learning Notes

### What this step is about

Learn the release pipeline instead of stopping at local development.

### Core Concepts

- Prepare package/bundle identifiers, versioning, release configuration and signed builds.
- Android releases use Google Play Console; iOS releases use App Store Connect and Apple's signing/review workflow.
- Before release, test crashes, permissions, privacy information, offline behavior, different screen sizes and production configuration.
- After release, monitor crashes, reviews and usage; keep dependencies updated.

### Skills You Should Be Able To Demonstrate

- Create a release checklist.
- Generate a release build.
- Verify app icon, name, version and permissions.
- Prepare store screenshots and description.
- Document rollback/fix procedures.

### Hands-on Project / Practice

- Publish a small portfolio app through a test or production store workflow.
- Document every step from source code to signed artifact to store submission.
